APPLICABILITY

The device is fitted with an electric motor drive and controlled from a control panel. It is equipped with a radio safety stop control. It is designed for a multi-level training program and prepared for overload training. The military trainer-simulator is a modern solution for the army, police, special services and pilot training to be used as part of training programs for better stamina and more effective performance under pressure.

Devices made in compliance with standards CE, EN-PN and ISO.

Additional equipment

Body parameter monitoring, instruments measuring blood pressure / pulse, speed of individual rings, overload, angular acceleration, a headphone – contact with the trainee, equipment for the Bárány test, measuring module for the Piórkowski apparatus, speech audiometry in noise /response times. The device may be adapted to accommodate any measurement / training purposes according to customer specifications.

Prices of additional equipment and device configuration are established individually.
